Computer Science student with hands-on experience in developing and testing software, through independent video game development projects and university coursework. Interested in learning, prototyping and debugging new technologies. Experience building and shipping web games on itch.io for various game design competitions and personal projects.

EDUCATION

Vrije Universiteit, Amsterdam — *Bachelor of Computer Science*

September 2025 - Current

Relevant coursework: Computer Programming, Data Structures and Algorithms,\
Smart Systems Engineering, Requirements Engineering, Systems Programming Project

XXXV Liceum im. Bolesława Prusa, Warsaw — *International Baccalaureate*

September 2021 - May 2025

PROJECTS

ThawStroke — *Game jam entry (Godot, GDScript)*

Developed and published a browser-based mini-golf game in seven days, handling programming, art, music and game design. Tested web builds across browsers and devices. Ranked **16th out of 216 entries (top 8%)** overall and **11th for Enjoyment** in the fifth 1-Bit Jam, with an average rating of **4.05/5**.

NotifyF1 — *Formula 1 results notification app (Python, SwiftUI)*

Developed a Python application that polls OpenF1 race data, detects driver-position changes and sends phone notifications through the **Pushover API**. Originally prototyped as a **SwiftUI** iOS app, then moved monitoring into a separate **Python** process to address background-execution limitations. Project archived following changes to live-data access.

Untitled Flower Shop Game — *Independent game project, currently in development (Godot/GDScript)*

I am currently developing a strategy-focused cozy flower shop game with card-based mechanics, scoring systems and customer interactions. Designed and implemented systems including deck/card management, drag-and-drop placement, save data and UI, while continuously testing, debugging and refactoring gameplay systems (linked YouTube video).

WORK EXPERIENCE

Starbucks, Amsterdam — *Barista*

January 2026 - August 2026

Delivered fast-paced customer service with heavy focus on team collaboration to ensure efficiency and positive experience. Engaged with a diverse customer base, building communication and conflict-resolving skills.

SKILLS

Programming languages: Python, GDscript, C++, JavaScript, Scala

Game development: Godot game engine, game design, rapid prototyping, playtesting

Web Technologies: HTML, CSS, Bootstrap, TailwindCSS

UX & QA: bug reporting, usability testing, iterative improvement based on collected player feedback

Workflow: version control with Git and Github

API integration & automation: HTTP requests, JSON processing, polling and notifications using Python and Requests.

LANGUAGES

English - C1, IELTS Certification
Polish - Native
